

Winemaker: Mimmo Costanzo
Generation: 1st

PALMENTO COSTANZO

Nero di Sei Rosso Etna DOC

Palmento Costanzo in Etna is a truly compelling estate in one of Italy's most exciting and visceral winemaking regions. With vines over 120 years old, 8000 vines planted per hectare, and 750 meters of altitude, this flagship wine makes the senses positively reel! Huge structure is softened by smooth tannins and layer upon layer of dark fruit and volcanic earth. Velvety, balanced and persistent, Nero di Sei is a sheer marvel on the palate.

WINEMAKER BIOGRAPHY

Making wine high on the side of an active volcano may not be everyone's calling, but it suits Mimmo Costanzo to a 'T'. Alongside his wife, Valeria, he creates wines with incredible, big-boned structure, intense minerality, and finesse. Ever committed to the environment, Mimmo has also all but effaced the estate's carbon footprint.

ENOLOGIST

Nicola Centonze

TASTING NOTES

- Color** Intense ruby red
Nose Dark berry and volcanic minerality
Palate Prominent, smooth tannins and layer upon layer of dark fruit and earth
Finish Long and complex, with hints of almond skin

VINEYARD & VINIFICATION

- Vineyard Location** Etna DOC, Sicily
Vineyard Size 10 ha
Varietals List 80% Nerello Mascalese
20% Nerello Cappuccio
Farming Practices Organic (non-certified); grapes dry-farmed and picked by hand; advanced bioarchitecture ensures low carbon footprint
Elevation 680-750 m
Soils Basalt with brownish volcanic sands and lava stones
Maturation Summary In large French barrels for 24 months and bottled for 12 months
Alcohol 14.0 %
Acidity 5 g/liter
Residual Sugar 1.8 g/liter
Annual Production 36,000 bottles

PALMENTO COSTANZO

In the year 2000, Mimmo Costanzo and his wife, Valeria, purchased 7 visually stunning hectares in the Contrada Santo Spirito cru, pressed onto the north slope of Mt. Etna. As this terraced 'moonscape' lies partially within the Parco dell'Etna, the estate is actually part of a protected Unesco site. Ergo, while the Costanzo's have added a few more hectares in the interim, nothing can be altered or changed over time. Their vines range in age from 7 to an incredible 120 years, with altitudes spanning 550 – 800 meters and roots diving down into vent-based, volcanic sands and lava-based basalt. At 8,000 vines per hectare, the plant density recalls Valle d'Aosta, with its packed terraces clinging onto steep slopes. Combined with picking by hand, organic farming, and low yields, this unique set of conditions helps to create some of the most astonishing wines in the Small Vineyards portfolio.

Baseline of all Palmento Costanzo's red wines is the formidable Nerello Mascalese. A late-ripening varietal, this grape is known for taut, herbaceous flavors, along with high minerality and nuanced, earthy tones. Surprisingly, DNA suggests that it's actually the once upon a time offspring of Sangiovese! Growing alongside it is Nerello Cappuccio, a 'little brother' that ripens slightly earlier, and whose color and perfume are used to soften the edges of Mascalese. Both clones of Nerello are high in natural acidity and possess pronounced "vertical" tannins, making a compare/contrast with old-fashioned Nebbiolo a fascinating exercise.

REGION

SICILY

A Mediterranean crossroads and Italy's largest autonomia, Sicily has been home to winemaking for some 6000 years. In the 8th century BC, the Greeks brought more advanced viticultural techniques to the island, and a brisk trade with Phoenicians and Romans ultimately followed. In more recent centuries, Sicily has been known mainly as a bulk provider of wine grapes – with the focus primarily on quantity – but that reputation is swiftly changing. In the 1980s and 1990s, Sicily's unusual terroir and potential for fine wines finally began to garner attention. Much of the acclaim was initially directed at international staples like Chardonnay and Syrah, but starting in the 2000s, natives like Nero d'Avola and Nerello Mascalese began taking their rightful place center-stage.

A trio of red grapes in particular are driving Sicily's growth today: Nero d'Avola, with its brambly fruit, juicy acidity, and softer tannins, is the most widely planted and wines are often fresh, unoaked, and affordable; Frappato, another easy-drinker with supple tannins, is mostly used as a blending grape; Nerello Mascalese, the powerful, elegant, and sometimes spicy or mineral-driven baseline for Etna reds, is second in volume to Nero d'Avola, but has been rising along with the DOC's popularity. White varietals of note include Cataratto, the most widely planted and often a starting point for Marsala; Grillo and Insolia, a pair of medium-bodied grapes that provide dry but substantive wines; and Carricante, the lush but zippy force behind Etna Bianco. With its dry, Mediterranean climate, Sicily affords its 23 DOCs and single DOCG abundant sunshine, moderate winter rainfall, and constant coastal breezes. As a result, the island's also well-suited to organic farming and the natural wine movement.

ETNA DOC

Established in 1968, the increasingly popular – and wholly unique – Etna DOC lies on and around Europe's largest active volcano. Much of Mount Etna's verdant natural landscape is protected under the auspices of the Parco dell'Etna, so even though vineyards have increased by nearly 200% in the past decade, the overall growing zone remains finite. (Currently, there are just over 900 hectares under vine.) With global demand at an all-time high and prices skyrocketing, some have likened the appellation to an "Italian Burgundy". Production is centered around the villages of Randazzo, Solicchiata and Passopisciaro, where growers have used dry stone lava to create terraces for centuries.

Mungibeddu, or 'A Muntagna, as Etna's called by the Sicilians, is home to a fascinating red varietal that doesn't thrive anywhere else on the island. Nerello Mascalese is a dark-skinned, herbaceous, and earthy grape that likes to show off its ripe largesse at warmer, lower altitudes; as the elevation increases and temperatures fall, it showcases higher acidity, taut, "vertical" tannins (not unlike those of Nebbiolo) and, thanks to the basalt-based soils, a marked minerality. Different deposits of volcanic soil can lead to myriad variations on this theme, however. With over 200,000 years of eruptions, countless lava flows have cascaded down Etna's slopes, intersecting and overlapping one another, such that even small estates may host multiple micro-terroirs.

Red and rosé wines from this DOC must be at least 80% Nerello Mascalese, with a maximum 20% Nerello Capuccio. Bianco must use a Minimum of 60% Carricante, with a maximum 40% Cataratto and/or a maximum of 15% of other permitted white varieties, including Trebbiano and Minella Bianca.
