Pra di Bosso Lambrusco Storico Reggiano DOP

With the rich and balanced "Storico" Lambrusco, we benefit from Pra di Bosso's top pick of Lambrusco grapes, and the smooth integration that comes from vines grown on the chalky "Ventoso" (windy) hills of Reggio Emilia. Combining the aromatics of Sorbara (cherry, balsamic, and violet) with the structure of Grasperossa, the Salamino clone provides us with elegance and depth. What strikes us most is the seamless weave of tannins and acidity - just as silky as dry Lambrusco gets!

WINEMAKER BIOGRAPHY

Devoted to a host of historic Lambrusco clones – each with its own distinct character – Casali has been making traditional wines in Reggio Emilia since 1900. With the Pra di Bosso line, they have sought to elevate the category through low yields and a meticulous balance of silky tannins and acidity. From their dry Lambrusco to their prized Storico, and even the estate's semi-sweet amabile, this through line remains a constant!

TASTING NOTES

- Color** Deep ruby with violet hues
- Nose** Wild berries, cherry, and touches of balsamic and violet
- Palate** Smooth, with vibrant dark fruit, well-managed acidity and fine tannins
- Finish** Tangy and well-balanced

VINEYARD & VINIFICATION

Vineyard Location	Reggiano DOC, Emilia-Romagna
Vineyard Size	2 ha
Varietals List	60% Lambrusco Salamino 30% Lambrusco Maestri 10% Malbo Gentile
Farming Practices	Grapes sustainably farmed, including dry-farmed, and picked by hand
Elevation	50-150 m
Soils	Calcareous chalk
Maturation Summary	In Steel for 2 months and Bottled for 1 month
In Steel	2 months
Alcohol	11.5 %
Acidity	8 g/liter
Residual Sugar	6 g/liter
Annual Production	25,000 bottles

REGION

EMILIA-ROMAGNA

Renowned for its regional cuisine, including Parmigiano Reggiano and Parma ham, Emilia-Romagna is a rich, fertile region in central northern Italy, and one of the nation's most prolific in terms of wine with some 55,000 hectares under vine. While best known for the frothy reds produced in its five Lambrusco DOCs (Grasparossa di Castelvetro, Modena, Reggiano, Salamino di Santa Croce, and di Sorbara), overall production is split between white and red grape varieties, and also includes Malvasia, Trebbiano, Barbera and Sangiovese. Given the large overall quantities grown, it may come as no surprise that a true minority (less than 20%) of wines from Emilia-Romagna fall into the category of DOC(G).

As far back as the seventh century BC, vines were introduced to this region by the Etruscans, then later adopted by the Romans, who used the Via Aemilia (after which the region is named) to transport wine between its cities. Notably, in the case of Lambrusco, vine varieties derive not from the *Vitis vinifera* whose descendants are grown throughout the world today, but rather from the *Vitis labrusca* species now unique to Emilia. Not unlike other ancient regions in Italy, a variety of altitudes, soil types, and mesoclimates allow for a wide array of biotypes and styles: near the western border, rolling sub-alpine hills and a cooler climate mirror conditions of next-door Piedmont; the vast, low lying hills and alluvial plains of Parma, Modena, and Bologna lay claim to much of the region's red wines (both sparkling and still); and to the east lie coastal flatlands and a maritime climate. Flowing west to east and demarcating the region's northern border, the famed River Po traverses the entire width of Emilia Romagna, linking the Apennines to the Adriatic Sea.

REGGIANO DOC

Located in central Emilia-Romagna, equidistant between Parma and Modena, this appellation was established in 1971 and is the largest of the region's five historic Lambrusco DOCs. While only red grape varieties are permitted - and the focus remains squarely on frothy, sparkling reds with a dark, purplish hue - today the DOC also allows for sparkling rose and sparkling white wines under its banner. Primary varieties include indigenous grapes such as Ancellotta (added to blends for color), multiple clones of Lambrusco (see below), and Malbo Gentile (a late-ripener often added to sweet wines). Outsiders such as Marzemino, Merlot, and Sangiovese are also permitted in small quantities. Lambrusco Spumante can be produced at virtually any level of sweetness - from brut nature to dry, and from amabile (semi-sweet) to dolce - but the best of each category combine ripeness, body, and acidic balance so as to pair with the rich regional cuisine.

Incorporating both wide, alluvial plains and rolling calcareous hills, the Reggiano DOC is home to an array of different soils and mesoclimates, and Lambrusco clones have developed independently from one another over the centuries, each tending to fare better under certain conditions. Central to production are Lambrusco Salamino (intense violet hue, good aromatics, and smooth tannins when grown in the fertile soils of the river plains), Montericco (late-ripening with great acidity when grown higher up in calcareous soils), Marani (floral, fruity aroma and green tannins from the valley floor), and Maestri (another clone which prefers the hillside, where it develops its telltale freshness and acidity). Most wines from this region tend to be blends made from weaving the various clones together - including those labeled 100% Lambrusco.

CASALI

Founded in 1900 by Giuseppe Casali, this 50-hectare estate is located in the village of Pratissolo, in the Scandiano foothills of central Emilia Romagna. For generations, the Casali family devoted themselves to the cultivation of multiple local clones of Lambrusco - including Marani, Montericco, and Salamino - alongside the indigenous white grape, Spergola, which they also used in the creation of the region's first Champagne-method sparkler (Ca'Besina) in the 1970s. Their local fame grew increasingly until 2014, when they officially joined the Emilia Wine Cooperative. Today, as then, the focus remains on crafting smooth, intelligent, integrated blends of different Lambrusco clones to help dispel the region's reputation for quantity over quality and help elevate their own DOP. Overseen by enologist Giulio Davoli, the Pra di Bosso line weaves together different clones, each grown in their own soil type and mesoclimate, to achieve wines of unusual poise and balance. For example, in the case of their dry Lambrusco, the Salamino and Marani grapes are grown at a lower altitude in fertile, alluvial soils, encouraging rounder, more aromatic, full-bodied wine. These are then combined with Montericco fruit, grown at higher altitude in soils that are more calcareous and less fertile, providing acidic backbone and an intriguing herbal and floral component. The result? A Lambrusco that is deeply balanced in terms of both tannins and acidity, and displays remarkable complexity for the price point. This theme remains in place from one end of the portfolio to the other, from Casali's dry wines all the way to sweet!
